FT BIG READ. TECHNOLOGY

Companies like Amazon and Microsoft routinely destroy millions of used hard drives in the name of data security – but industry insiders say they are ignoring a better, greener and cheaper option.

By Alexandra Heal and Anna Gross

me.” They

systems a secure way to leave the
building – despite the fact we could
wipe them on site then sell to a new cus-
tomer who could make use of them for
years to come... It was a complete
waste.”

Parise had experienced first-hand the
ubiquitous industry practice of shred-
ding data storage devices.

Every day when you fire off emails,
update a Google document or take a
photo, the data generated is not stored
in a “cloud” as the metaphor suggests,
instead it is stored across several of the
world’s estimated 70m servers, each

Morgan Stanley to pay \$35M after hard drives with 15M customers' personal data turn up in auction
